

BenefactorCloud

As someone who has spent over 25 years working with grant-making organisations and charitable sector, I understand the unique challenges local authorities face in managing community grants efficiently while maintaining transparency and accountability to your constituents. Local councils are under increasing pressure to demonstrate value from every pound spent on community initiatives with many relying on inefficient admin methods to support them.

At Gallery Partnership, we've developed BenefactorCloud specifically to address these challenges. Our clients report a 90% reduction in time processing applications, freeing up your valuable resources to focus on community impact rather than paperwork. We don't just provide software - we build long-term partnerships. Our team of grant management experts ensures seamless implementation with minimal disruption to your operations. We provide personalised training and dedicated ongoing support because we understand that your needs will evolve over time.

One of the benefits of working with Gallery Partnership and BenefactorCloud is easy procurement via the HM Government G-Cloud Digital Marketplace, where you can find technology for digital projects in the public sector. The Public Procurement Gateway has been designed to streamline procurement services for both buyers and suppliers and we are an approved supplier.

With BenefactorCloud currently trusted by over 80 organisations across the UK, we bring proven expertise specifically tailored to the grant-making sector. Our focus has always been on empowering organisations like yours to achieve maximum impact from their funding programs. The future of grant management is digital, transparent, and efficient. Let's work together to ensure your council is at the forefront of this transformation, delivering better outcomes for your community while reducing administrative burden on your team.
